Completion

2005

Assignment

Program Management

Bovis Lend Lease managed the construction of 20 new Air BP airships supply stalls (gas stations) in full compliance with BP's corporate model, applying BP's safety, quality and environment polices, essential for Air BP.

The estimated time frame for each was three months with a two-month design phase, presentation and approval from BP in the United States.

Bovis Lend Lease successfully implemented its Safety, Health and Environment program, applying BP's gold rules, as well as Bovis Lend Lease's global minimum requirements. The daily safety training includes the application of DDS (Dialogue of Safety), specific local safety regulations, preliminary danger analysis, "almost incident" and "near miss" daily reports, induction training and on-site safety auditing. Through the project team's daily dialogue, personal commitment and application of Incident and Injury Free mindset, the goals were attained.
